

THE ALBERT PROJECT VR EXPERIENCE

Samples of the Albert Project™ VR experience can be found by scanning the QR code below:

TO START

To enjoy the Albert Project VR experience on your mobile phone you will need to download the Youtube and Google Cardboard applications from the Google Play Store (Android) or the App Store (iPhone).

Directions for Google Cardboard Viewer:

When you have located the VR video you want to watch, pause the video and turn your mobile device to the horizontal position.

You will see an icon that looks like a mask next to the time bar. Press on it and your view will change to two mirrored windows, one for each eye.

For the best viewing experience you will need to calibrate the YouTube Player for your particular cardboard viewer. Begin by clicking on the gear icon in the top right corner of your phone.

This will open the settings for your viewer. Press switch viewer and scan the following QR code, which formats your Youtube app viewer to be compatible with the cardboard viewer. You will probably have to select “allow” so the application can use your camera to scan the code.

Once scanned you will be taken back to the settings screen. It will no longer say “default” it will now say “DAYDREAM.LT viewer”. You will see an icon next to the time that looks like a mask. Press on it and your view will change to two mirrored windows, one for each eye.

NOTE – You can change your video experience by clicking on the 3 dots in the top right corner of the screen and selecting “Quality.” Select the highest quality that your internet connection will support. If your connection is not strong enough and you choose the highest quality, the video may take some time to load. Youtube will default to a low-quality image to play immediately, which may appear grainy or pixelated.

Slide your phone into the viewer to watch in VR!

To control stop, start, and to shuttle through the timeline move the white dot over what you would like to select by moving your viewer and press the button on the top right of your cardboard viewer to select.
